

Apeos Linkage Solution

# DSLink

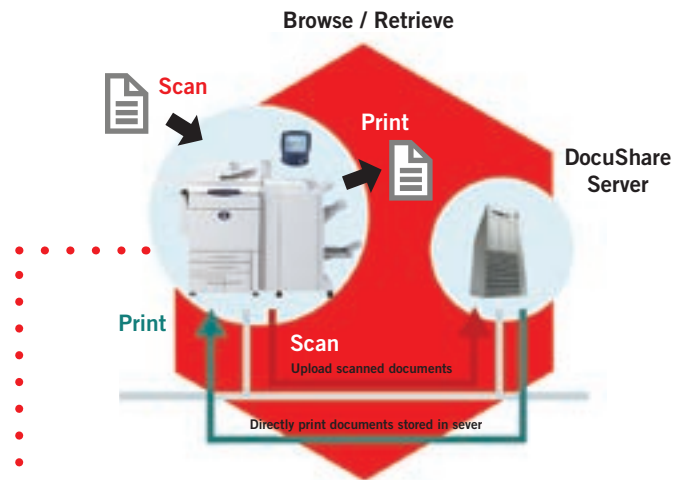

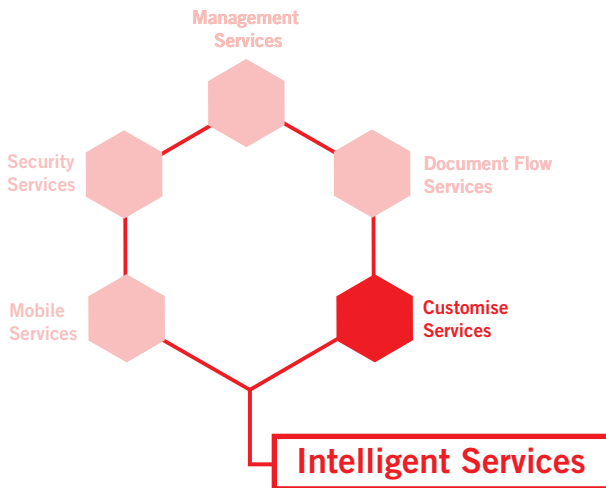

for ApeosPort

Integrated Apeos Solution  
to streamline your workflows

# Transforming a multi-function device into a DocuShare Portal

Fuji Xerox now offers an Apeos Solution for DocuShare; DSLink for ApeosPort. This solution provides web access to a DocuShare server directly from the customised Web Browser of our latest multi-function devices — the ApeosPort range. DSLink for ApeosPort enables document-intensive organisations to streamline document workflows, by reducing the processes involved with the simple storage and retrieval of documents.

## About DocuShare

Fuji Xerox DocuShare® is a Web-based application, that allows companies of every size to easily and affordably deploy a content management solution that enables the capture, management, retrieval and the delivery of paper documents in a digital format, regardless of user skill-level, platform, or location.

## About ApeosPort

In addition to having basic features such as copy, print and scan ApeosPort is also a multifunction device capable of accessing the network directly as an 'information Portal'. Equipped with Apeos: IIX Web Services framework, it can interface directly with customer's critical business systems, such as ERR, CRM by utilising XML/SOAP technology.

## Features of DSLink for ApeosPort

This is an easy to use web application, displayed on the Web User Interface (Web UI) panel of any enabled ApeosPort device. It allows users to access DocuShare servers with their given DocuShare permissions.

The look and feel of the ApeosPort Web UI is consistent with the DocuShare web interface that a user would view at their desktop PC. Screen operations have been simplified to promote storage and retrieval.

Users can access the DocuShare server directly from ApeosPort Web UI to specify the location and meta-data for the scanned documents, as easily as making copies.

- Through the Web UI, users can select and carry out driverless, high-speed printing of documents stored on the DocuShare server. Simply navigate to the document via the ApeosPort Web UI and print\*. This is all done at the device. (i.e. no need to download to a PC and print)

- Being Server-based licensing, organisations need only deploy just DocuShare server enabled with the DSLink for ApeosPort module and integrate with an unlimited number of ApeosPort multifunction devices.

## Benefits

### Increased productivity with fewer operational steps

With direct walk-up access and simplified user interface operations, users can store or retrieve information easily, without having to move between client desktops and printing devices.

### Increased flexibility with On-demand Print capability

Users can access required documents in most native formats\*, even EPS etc, anytime anywhere and print directly to the device at which they are standing. They can even specify the output format.

### Reduced Total Cost of Ownership

With a server-based licensing scheme, users can access the same DocuShare server directly from any ApeosPort device without requiring a dedicated PC or additional software.

## Software Requirements

<b>OS</b>	Windows® 2000 Server with SP4 Windows® Server with SP1
<b>DocuShare</b>	DocuShare® Server 3.1 or 4.0.2 DocuShare® Client 3.1 or 4.0.2
