

Fuji Xerox Healthcare Solutions

Modernise your practice by digitising document-intensive processes to help give staff more time to look after the animals that need them.

See more patients and look after them better

Fuji Xerox Australia can help you increase the efficiency of your veterinary practice with solutions that reduce the amount of paper changing hands. By working with your existing systems to digitise key processes, we can help you reduce the cost of printing and handling documents, and provide the kind of access to information that aims to improve patient care and practice bottom line.

Start by digitising a single process, or transform your practice from end-to-end – securely, reliably and sustainably.

DOCUMENT AND WORKFLOW SOLUTIONS

Digitisation gives your practice the power to handle all that 'paperwork' far more efficiently, save time and money, and redirect resources into caring for patients and their families. Fuji Xerox can help you to:

- **Simplify the way you manage information, to reduce administrative time and cost.** Replace paper forms with eForms that automatically update patient records instantly.
- **Free up staff to focus on patient wellbeing.** Reduce the time vets and other staff spend on admin by digitising documents and streamlining document management workflows.
- **Provide quick access to patient information,** with the ability to access digitised documents quickly, efficiently and securely from anywhere in your practice.
- **Streamline patient registration and other processes.** Digitise registration using eForms and import that information directly into patient records – removing time-consuming data entry.

ADMINISTRATIVE SOLUTIONS

Improve the efficiency of your administrative operations, reduce print costs and paperwork, and free up time and resources. Fuji Xerox can help you to:

- **Create the optimal print environment for your practice.** Save paper, power and money, and increase sustainability with complete control of printing.
- **Track all copying, printing, faxing and scanning** to reduce and/or recover costs.
- **Digitise patient information** to reduce the growing cost of storing and archiving paper, and provide access to information when needed.
- **Ensure the security of patient records** with secure printing.
- **Manage visitors and contractors** with digital check-in and check-out processes to maximise security.

ADVANCING PATIENT CARE

Planning surgeries in 3D. Fuji Xerox can help you advance your practice to the cutting edge of care, with 3D printing solutions that enable printing three-dimensional models to assist in planning surgeries.
